MASSAGE CHAIR

## SPECIALS

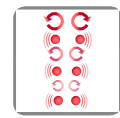

### BRAINTRONICS®

Braintronics® technology synchronises your brainwaves through audio stimulation. Combined with a specially developed massage programme your stress-ridden body will be able to relax.

#### ROLLING

Pleasant alternation between relaxation and releasing the muscles – also perfectly suited for a final massage, for relaxation and recovery of the muscles.

#### KNEAD & TAP (DUAL ACTION)

The techniques of kneading and tapping are combined in order to relieve tension and stimulate blood circulation at the same time.

#### KNEADING

Skin and muscles are either clasped and kneaded between the thumb and the index finger or with both hands. This massage technique is used in particular to ease tension.

#### TAPPING

Short, tapping movements are performed with the edge of the hand, the palm or the fist. This promotes blood circulation in the skin and softens tense muscles. If tapping is performed at lung height, this can improve the release of mucus in the lung.

#### AIR COMPRESSION (only footmassager)

Rising and receding airbags have a pumping motion which produces natural muscle reflexes. This is particularly beneficial in the calf and foot area.

#### HEATING (only footmassager)

A deep penetrating and heat-radiating effect in which one can perfectly relax. This function is particularly beneficial for muscle tension due to the deep reaching effect.

#### AUTOMATIC

3 specifically developed automatic programmes for the whole body, which offer a big range of different massage techniques. Additionally you can also turn on the heating function, if you'd like.

#### QUICK START

With one touch the quick start buttons in your armrest allow you to control the most important functions.

#### RECLINING POSITION

The adjustability of the backrest and footrest contributes to personal well-being of the body position.

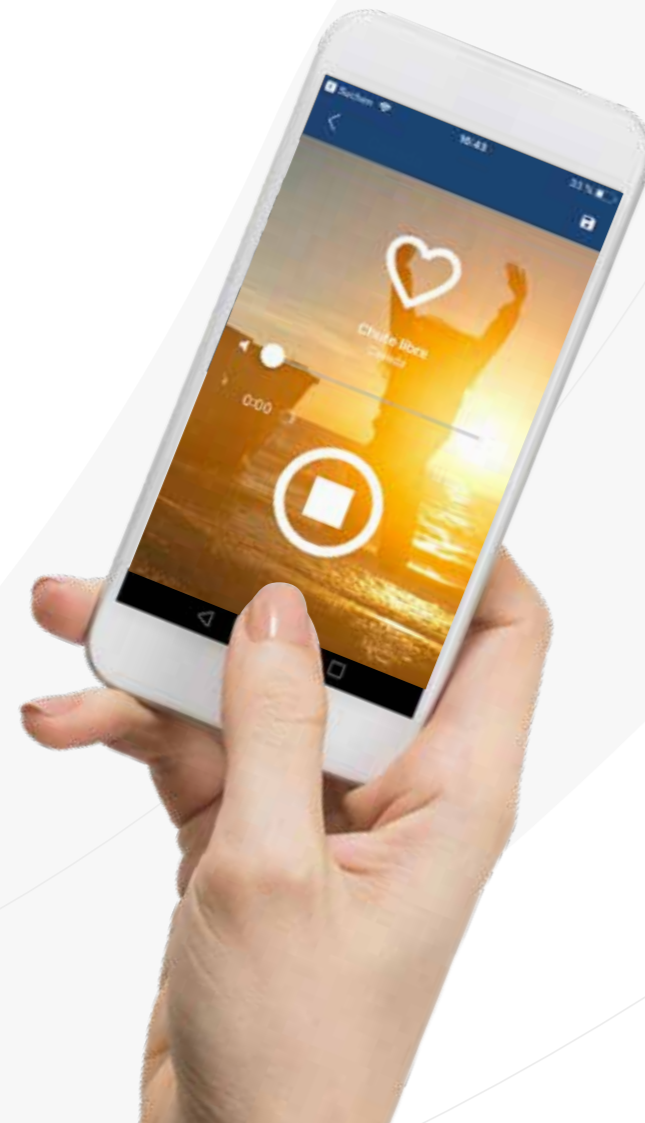

#### REFLEXOLOGY

Reflexology regenerates foot muscles and has a harmonizing effect on almost all organs inside your body.

#### SOLE ROLLER

Deluxe foot massage – even the speed of the foot rollers can be adjusted.

# braintronics®

## brainwave stimulation system

The human brain is a complex organ consisting of millions of little nerve cells, called neurons. Each cell constantly produces tiny electrical impulses. Every thought, every sound and every impression, everything is transmitted and communicated by those small electrical impulses. Electricity is, so to say, the language of the brain. The sum of those impulses can be detected and diagrammed, e.g. by using an EEG. Charted on a graph this electrical activity forms a wave-like pattern, known as brainwaves.

With braintronics®, combining audio stimulation and guided meditations with a soothing massage, these brainwaves can be stimulated in order to reach different states of relaxation in the brain. Whether you want to sustainably enhance your concentration, or just relax and pamper yourself – everything is possible with a massage chair from the Casada family.
